Indigenous Swine Flu Vaccine

Script 1: 1 x 45 sec

Swine flu's still here and it keeps making our people sick.

A free vaccine is now available to protect everyone.

If you, or anyone in your family, are pregnant or around young kids, or have a serious health condition like asthma, diabetes, obesity, heart or kidney disease, you can get much sicker from swine flu.

Even if you're fit and healthy, getting this flu is risky for you and for those around you.

Wherever you live, out bush or in town, talk to your local health service about getting a shot.

Getting vaccinated protects you and protects your community.

Authorised by the Australian Government, Canberra. Spoken by

Version 1: male voice in a slightly faster urban/regional style and tone (more urbanised inflection to reach city and large regionals)

Version 2: female voice in a slower regional/remote style and tone
